

## Maritime Green House Gas Reduction Course

### Introduction

With the introduction of the EEDI, SEEMP, MRV, DCS and the Initial Strategy on GHG by IMO, the change towards GHG free shipping has started. Learn about what applies now for your ships and what will be applicable to your business in future. Learn about the status of technical developments and what policy changes can be expected.

### Goal

After this course you will have learned about the following subjects:

- IMO initial strategy and its effect on shipping for the short middle and long term
- EU measures on GHG reduction
- Possible technical solutions for existing ships and future ships
- The effect on economics of shipping
- The policy changes and enforcements by flag states and port states

### For whom

Maritime professionals such as officers on board ships, super intended, technical managers, operations managers, ship building managers, maritime professionals working for the government involved with environmental issues. Etc.,

### Duration

1 day from 09:00 until 17:00

### Program

- Introduction: Framework for GHG reduction policies
- Part one: Current situation and short term measures from IMO and EU perspective.
- Part two: Midterm measures
- Part Three: Long term measures and energy transition in the shipping sector

During all three parts we will deal with the technical solutions, the effect on economics of shipping and the policy measures and enforcement.

Policy issues: EEDI, SEEMP, MRV, DCS, CO2 taxation and trading

Technical issues such as applying wind, solar, methanol, hydrogen LNG etc

Economic issues: Pricing of fuel, investments in new builds and retrofit

Enforcements: what can EU and IMO do to enforce new measures. The role of flag state and port state.
